

LIEBERT® PST5™ SINGLE PHASE UPS

The Liebert PST5 is a compact, single phase, offline UPS. It provides reliable power backup, surge and over/under voltage protection for professional workstations and PCs.

The PST series is designed especially for small office equipment like workstations, PCs, servers, small routers, switches, point of sale terminals/kiosks and other electronic equipment. It provides low cost UPS protection with features not available in price competitive models.

Product/Solution Capabilities

- Offline UPS for backup and surge/voltage protection
- 120V UPS with 350, 500, 660, or 850 VA options
- 8 Outlets — 4 with battery/surge protection and 4 with surge only protection
- Hot swappable user replaceable battery
- USB communication and MultiLink shutdown software provides remote alerts and complete unattended orderly shutdown of connected systems

Differentiation

- 3 year replacement warranty
- Energy star certified
- MultiLink remote alerts and complete unattended orderly shutdown of connected systems
- Lower price with better features and performance than competitor offerings

Target Buyers and Their Problems

IT/Network managers, administrators and individual users in organizations with professional workstations and other sensitive electronics:

- Power outages damage equipment and cause loss of unsaved work
- Power anomalies degrade system reliability and longevity
- Lack visibility to monitor and manage remote IT power status
- Expensive to maintain remote IT equipment and applications
- Personnel and budget resources are stretched thin

Questions to Ask

- What type of equipment will the UPS support?
- Does your equipment ever lock up or freeze, requiring a reboot?
- What load, voltage and conditioning requirements do you have?
- Do you need to remotely monitor and manage the UPS?
- What are the power input and output requirements?
- What backup runtime is needed in the event of a power interruption?
